

Air-Row for Grid Ceilings

LA-248 and DA-248

Our powerful and problem-solving lay-in ceiling fan can also be a versatile direct air powered register with in-room air circulation.

Air-Row's powerful lay-in fans use what you already have — trapped air at the ceiling — to equalize the temperature down below. In the process, we allow your HVAC system to cycle off for significant energy savings.

Our classic lay-in fan, the LA-248, fits easily within 2x2 grid work. Our direct air rotation model, the DA-248, is completely self contained and can be augmented virtually anywhere along your duct work to solve air distribution and ventilation challenges.

Air-Row De-Strat Fans Bottom-Line Advantages

- Cut HVAC-related energy costs by more than 25%
- Extend the performance life of HVAC equipment
- Maintain dry floors and prevent accidents for improved customer safety
- Redistribute air and eliminate stale air to improve air quality standards
- Improve overall comfort for employees and customers
- Target air to strategically resolve building challenges
 - Hot and cold spots
 - Wet floors
 - Fogging/sweating on doors and windows
 - Mold/mildew build-up
 - Starving long-runs

Features and Options –

Electronically Controlled Motor –
Air-Row Fan products come standard with a multi-speed programmable EC motor, thermally protected, with an on/off switch that may be factory preset.

Durable Metal – Air-Row fans are created of durable metal for a long-life and exceptional performance years after installation.

Speed Control and BAS Interface –
Air-Row fans may be grouped in multiple and tied to a controlled integrated circuit available to interface with BAS.

Easy Field Serviceability – Air-Row fan products are field serviceable, allowing easy access for maintenance and repair.

Paint and Color Matching – Air-Row fans may be paint matched and powder coated to conform to store environments.

From Our Customers –

“We had three (3) rooftop units working full-time. With the addition of the fans, we just have one (1). Our night recovery went from four (4) hours to 30 minutes.”

New from Air-Row – Our Open Ceiling Lay-In

Air-Row's new open ceiling lay-in is perfect when air from the plenum is not a concern. The product is now in testing.
